

PLTW High School Showcase & STEM Signing Day

Wednesday, May 16, 2018, 9:00am-1:00pm at WPI

A showcase of Project Lead The Way student work from & special recognition of seniors who are committed to studying STEM in college.

In Project Lead The Way's high school courses, students engage in real-world problem based learning. Throughout the year, student tackle different problems and projects as they learn about the engineering design process. At the high school showcase, student teams will have an opportunity to share their project designs with STEM professionals as they discuss their projects and process.

As part of this event, we also plan to celebrate the scholastic achievement of students who are continuing their STEM education in college. The STEM Signing Day is an opportunity to recognize students who have taken multiple years of PLTW courses during high school and plan to study a STEM discipline after graduating.
